Rangarajan Dr. Sagunthala  
R&D Institute of Science and Technology  
(Deemed to be University Estd. u/s 3 of UGC Act, 1956)

**SCHOOL OF COMPUTING**

**DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING**

## **USECASE SUBMISSION**

<b>Pro g r a m m e</b>	<b>:</b>	B.TechComputerScience&Engineering
<b>Course Code / Course Name</b>	<b>:</b>	10211CS207 / Database Management System
<b>Year / Semester</b>	<b>:</b>	2025-26 / Summer
<b>Faculty Name</b>	<b>:</b>	Dr. Krishnaveni.N
<b>Slot</b>	<b>:</b>	S7L1
<b>Task No</b>	<b>:</b>	1
<b>Title</b>	<b>:</b>	<b>HOSPITAL INFORMATION SYSTEM</b>
<b>Problem Statement</b>		they often rely on inefficient, manual, and fragmented processes, leading to delays, errors, and poor data management. This results in challenges like long patient wait times, difficulty accessing complete patient records, and inefficient resource allocation. A comprehensive, integrated Hospital Information System (HIS) is needed to automate tasks, improve data accuracy, enhance communication, and reduce operational inefficiencies and errors.

**Name of the Students**

**VTU28535 - Om Prakash Tripathi**

**VTU28158-CHIDIPOTHU VENKATA  
LOKESH**

**VTU28159-GORREPATI MANVITH  
GUNA**

**VTU28251-KAVARTHAPU MOHAN  
SATHWIK**

**VTU28481-GUDUPU NAVADEEP**

**VTU28495ALLAMPALLI BHAVYA SRI**

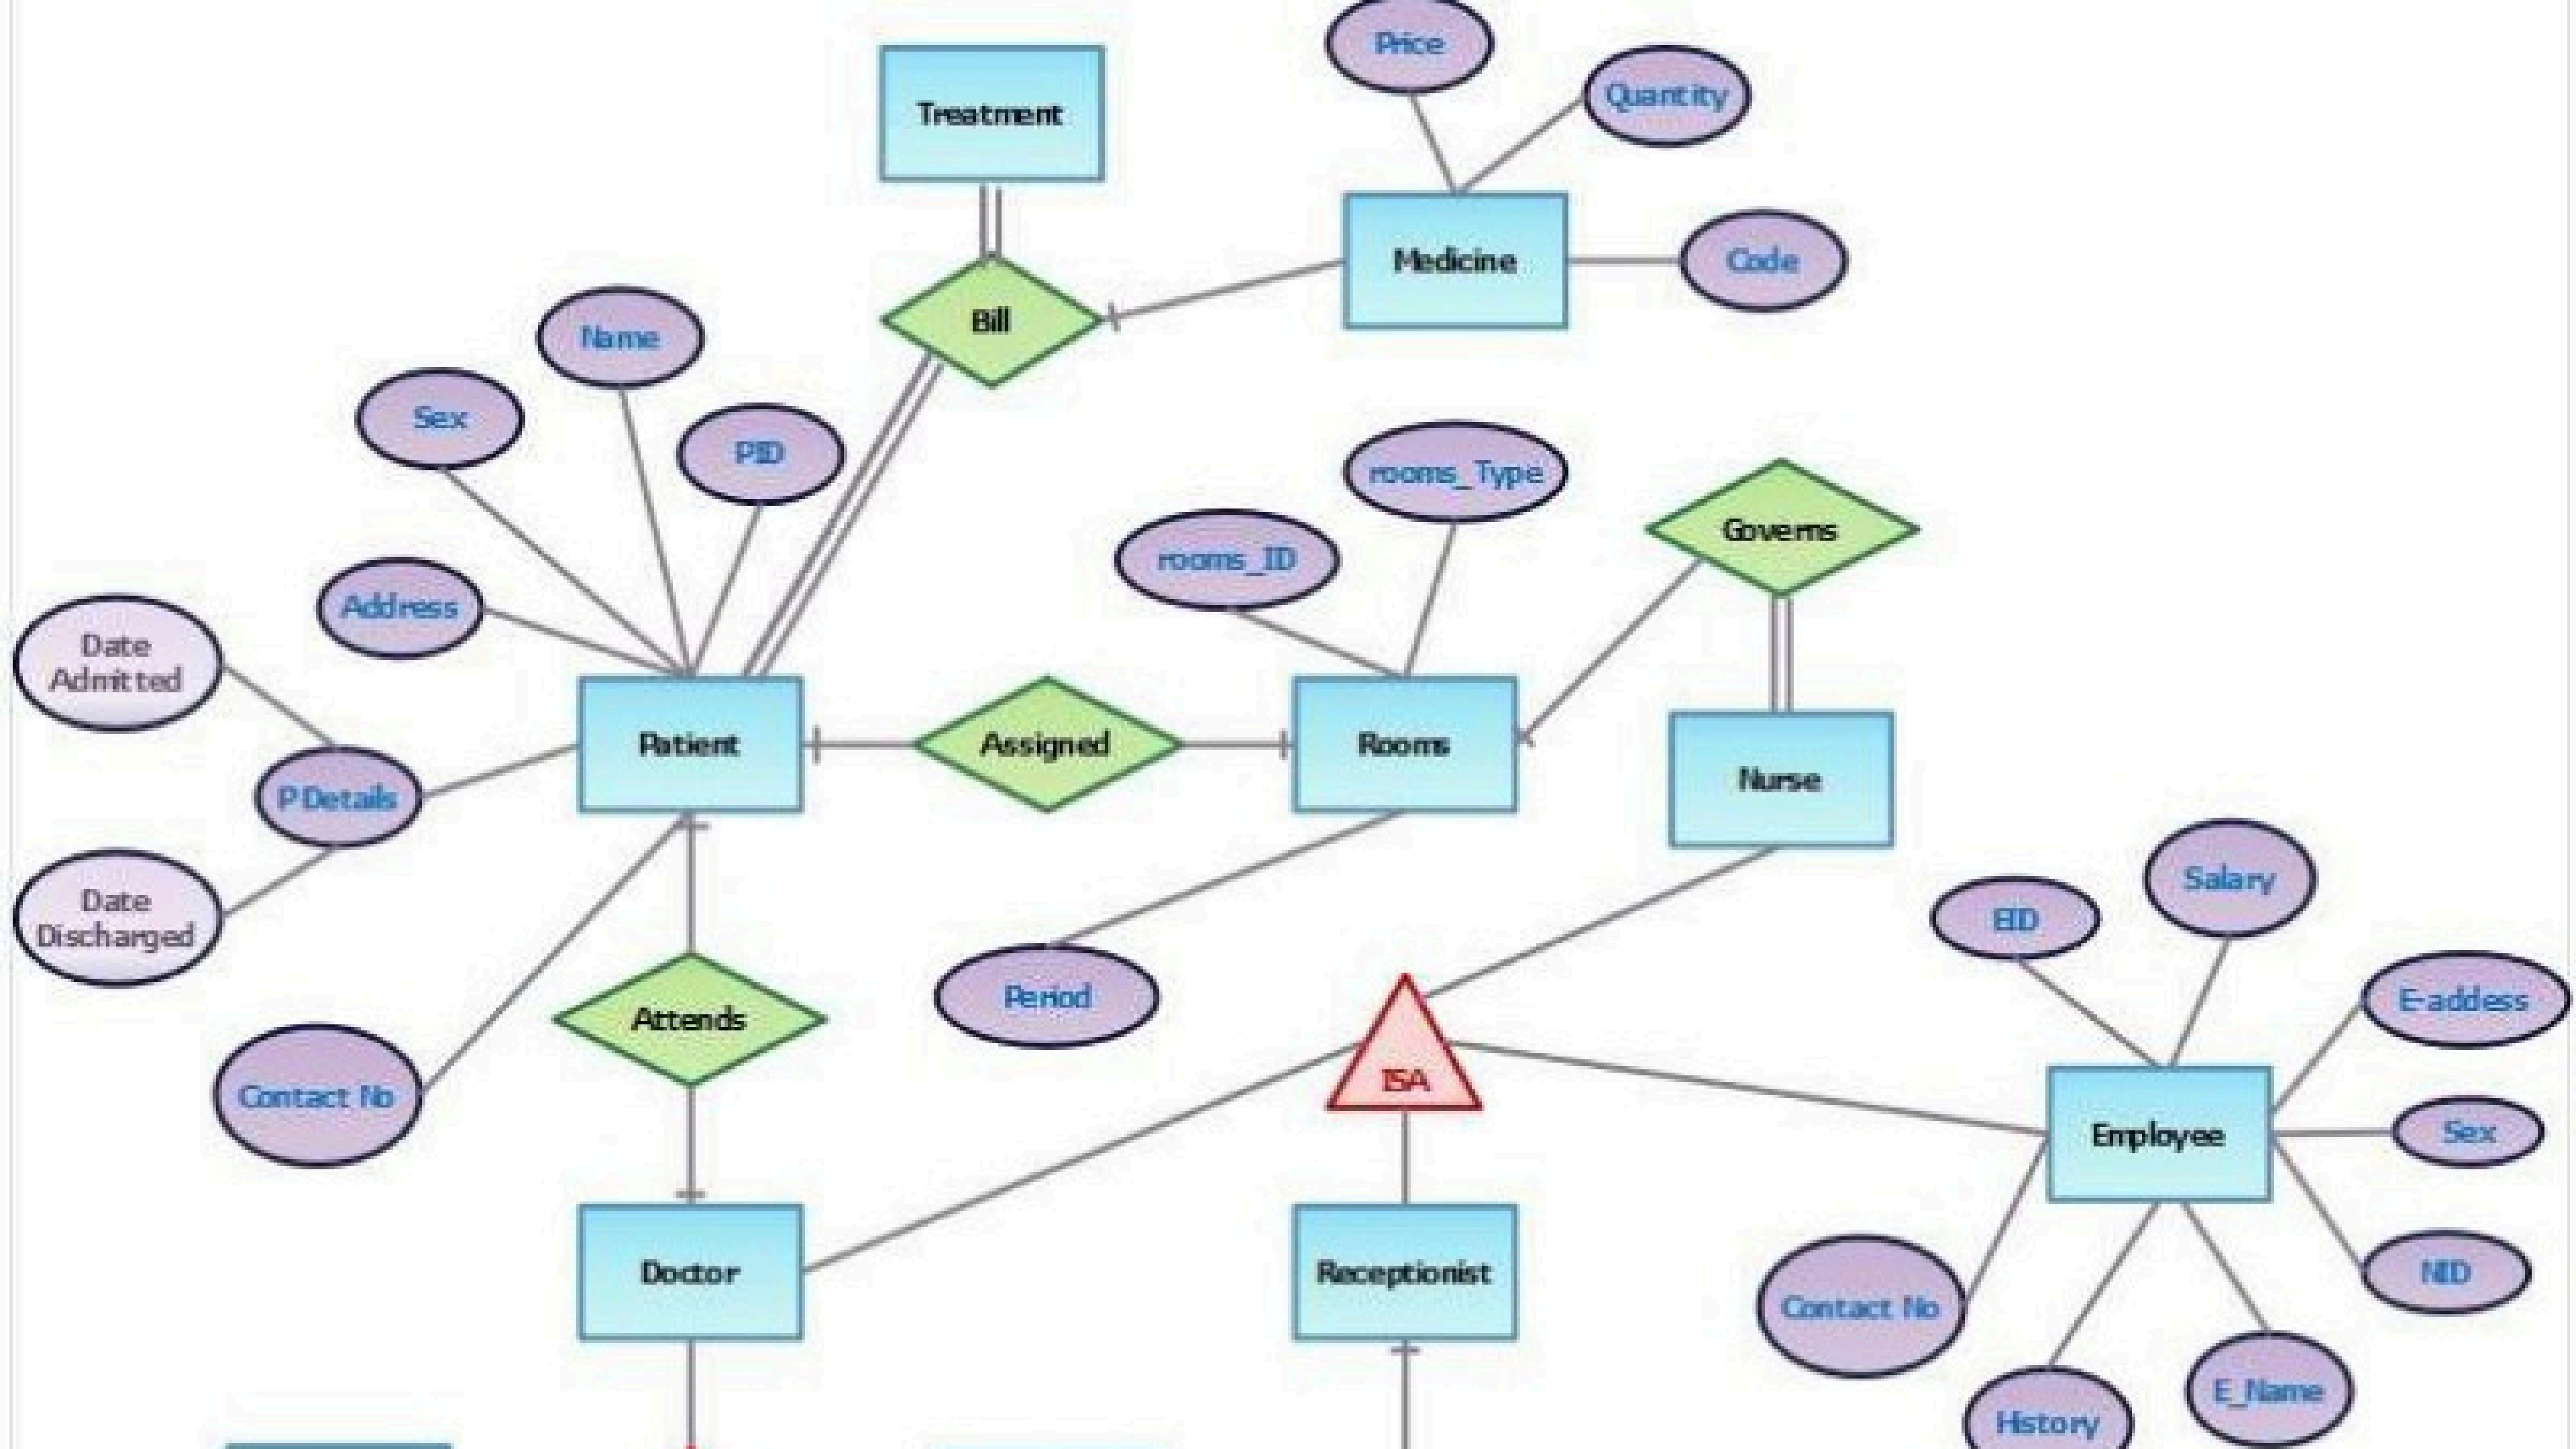

**VTU28561-CHALAMSHETTI SWAMY  
NAGA NARASIMHA NAIDU**

**VTU28599-KONERU YOGESWAR**

**VTU28645-PITTALA BUNNY**

# Evolution

- Integration of systems enhances **communication** between departments
- Improved data accuracy leads to better **patient outcomes**
- Adoption of electronic health records streamlines **workflow**
- Use of telemedicine supports **remote care** and access

# Core Concepts of Database Management Systems

Organizes hospital data efficiently

Ensures data integrity and security

Supports large data volume  
management

# Types of Databases

## Relational

Structured data in  
tables

## NoSQL

Flexible schema for  
diverse data

## In-Memory

Fast access for real-  
time data

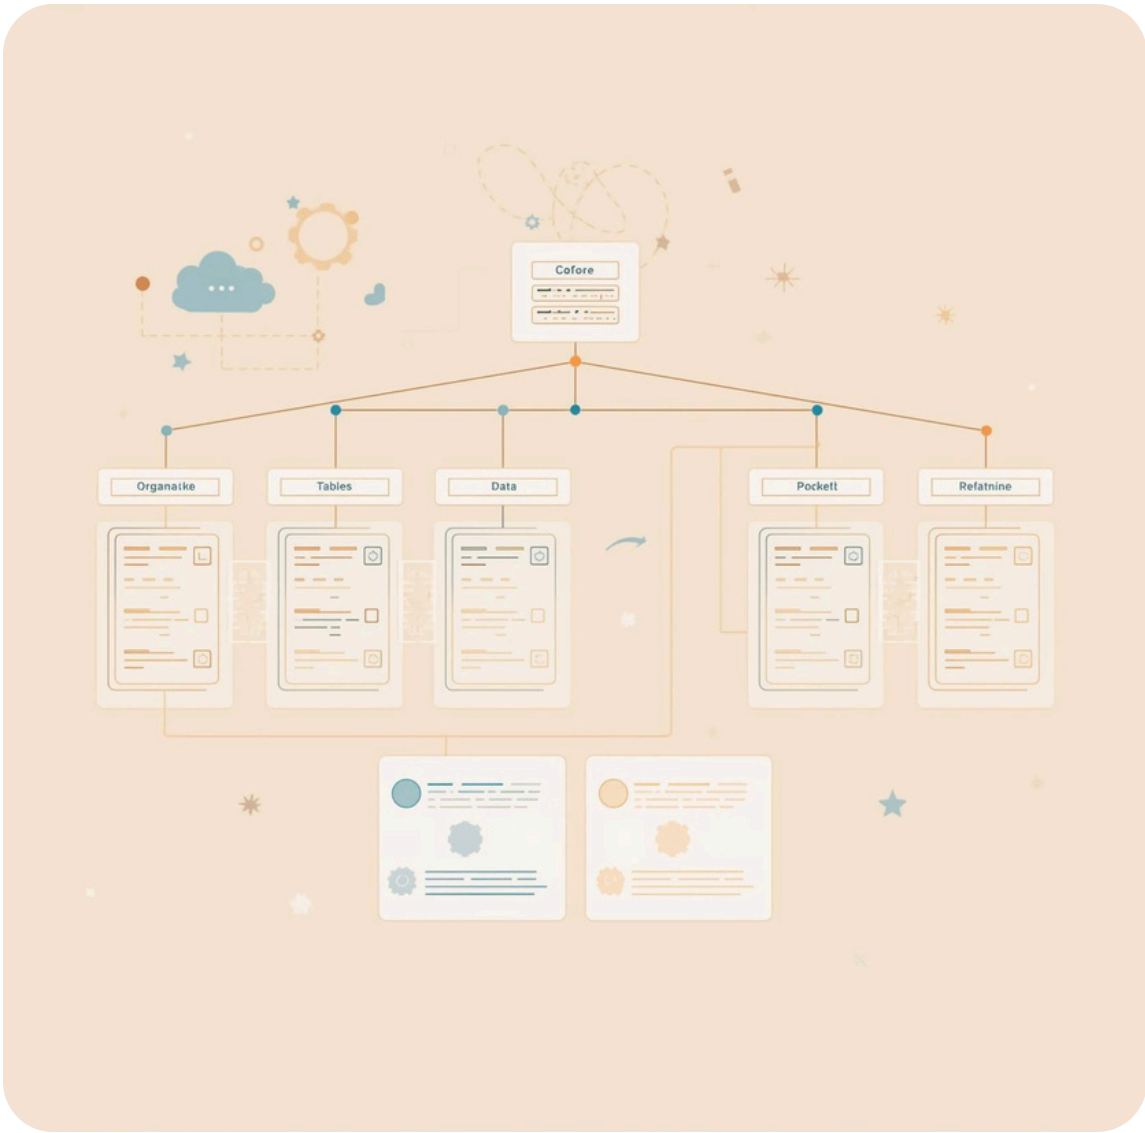

## Cloud

Scalable storage and  
access solutions

# Core DBMS Features

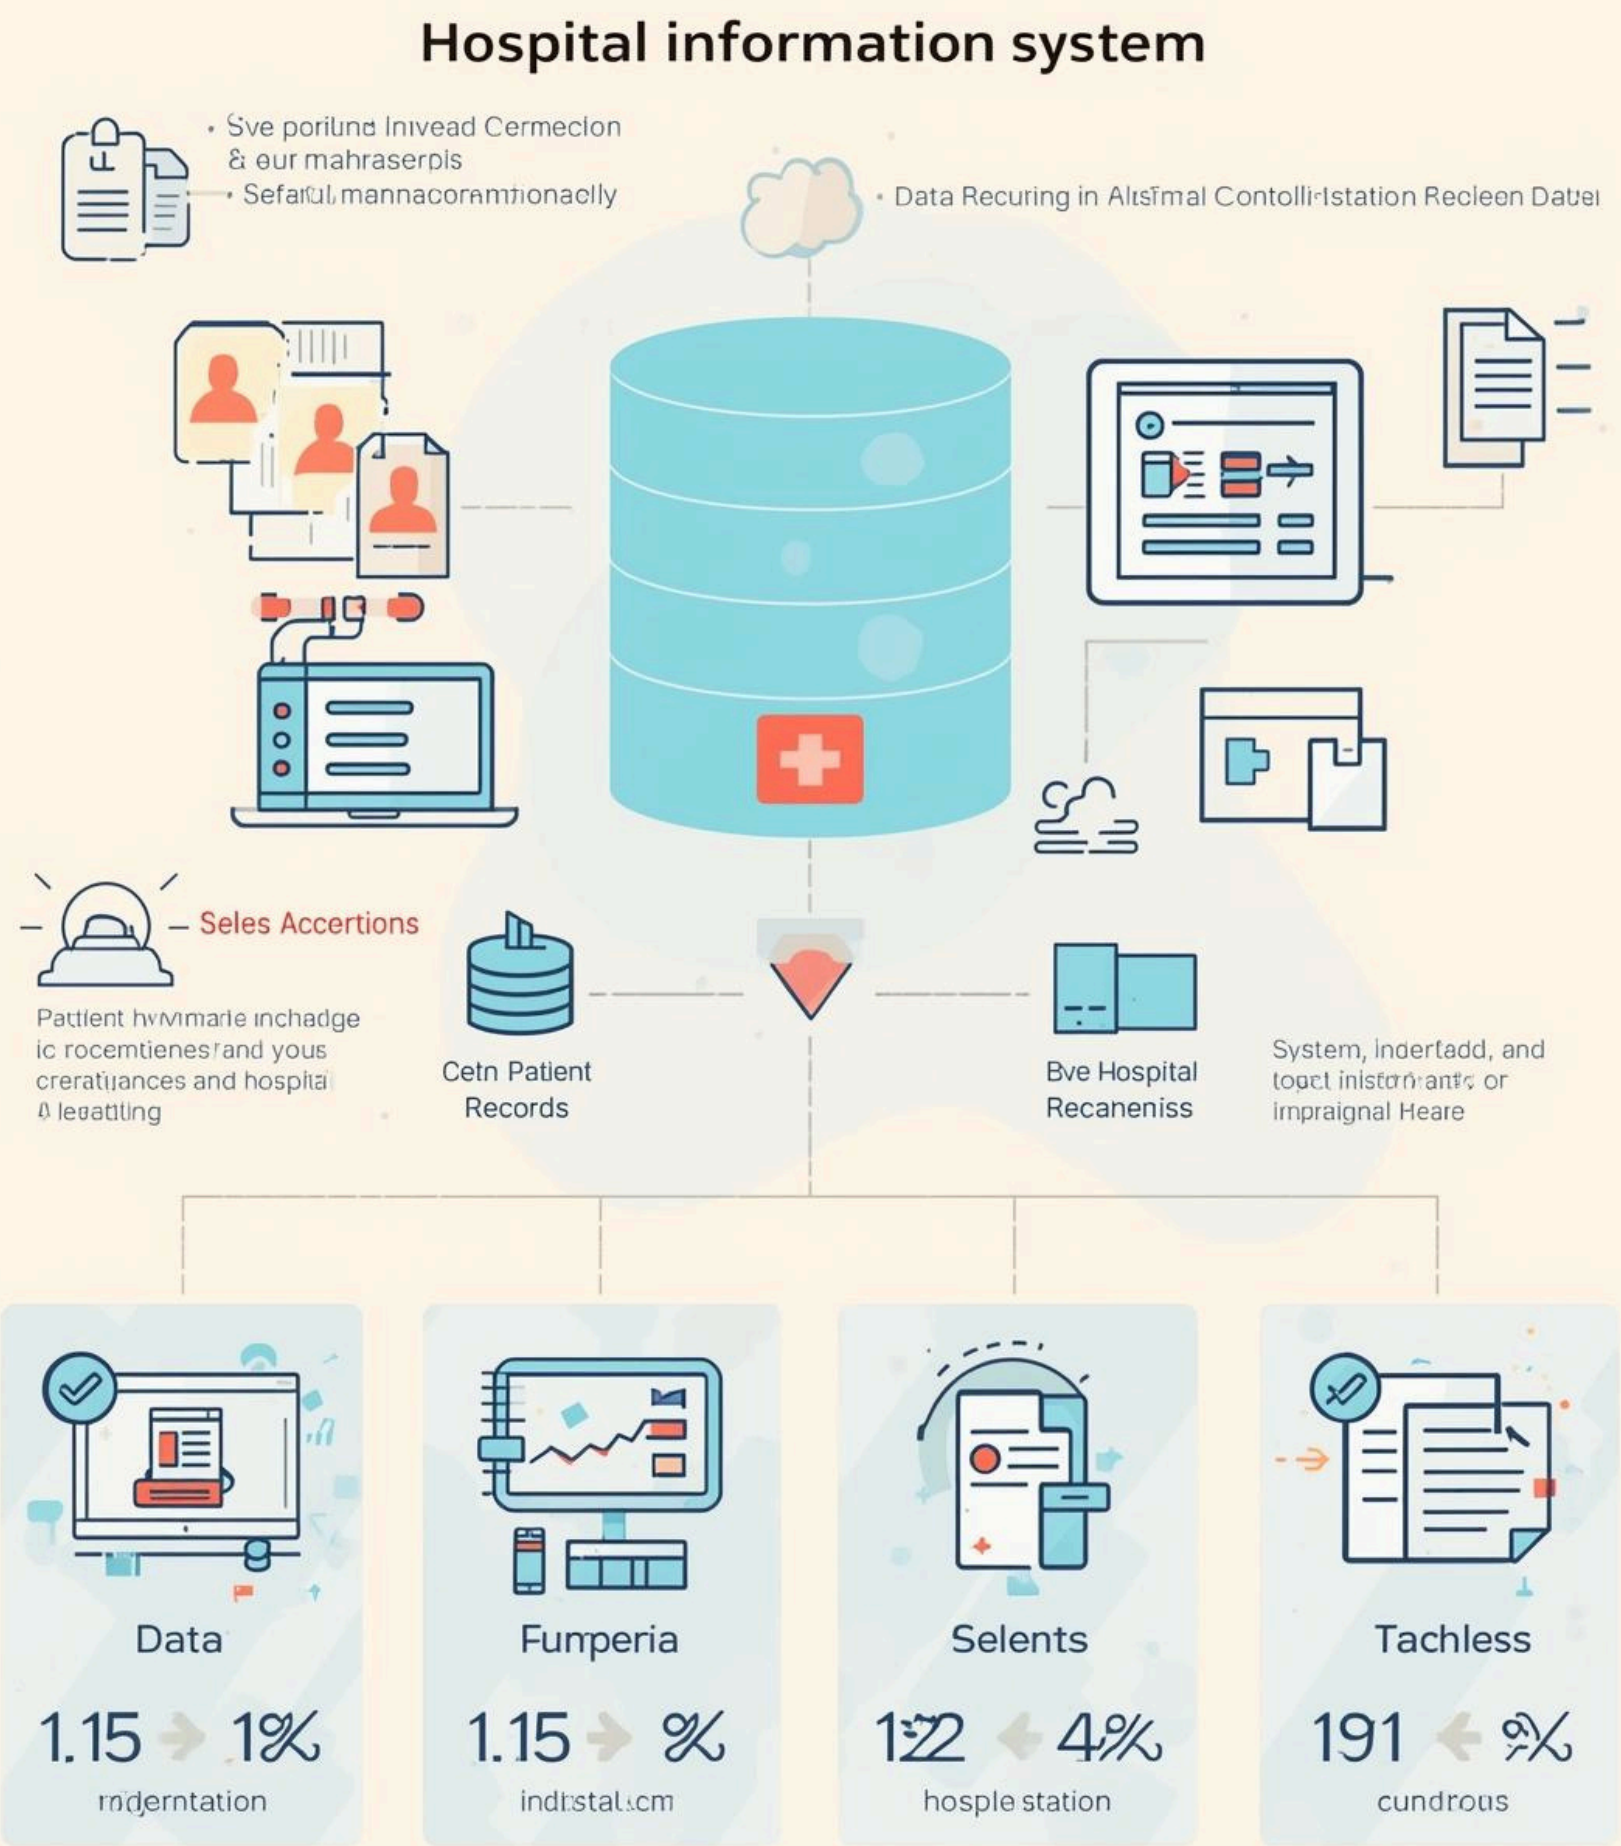

Essential functions for effective hospital management

# DBMS in HIS

Supporting efficient data management and retrieval processes

# HIS and DBMS Interaction

## Effective Data Management in Healthcare Systems

The integration of HIS and DBMS allows seamless management of patient data, ensuring accurate data flow, reliable access, and strong security measures essential for optimal healthcare delivery.

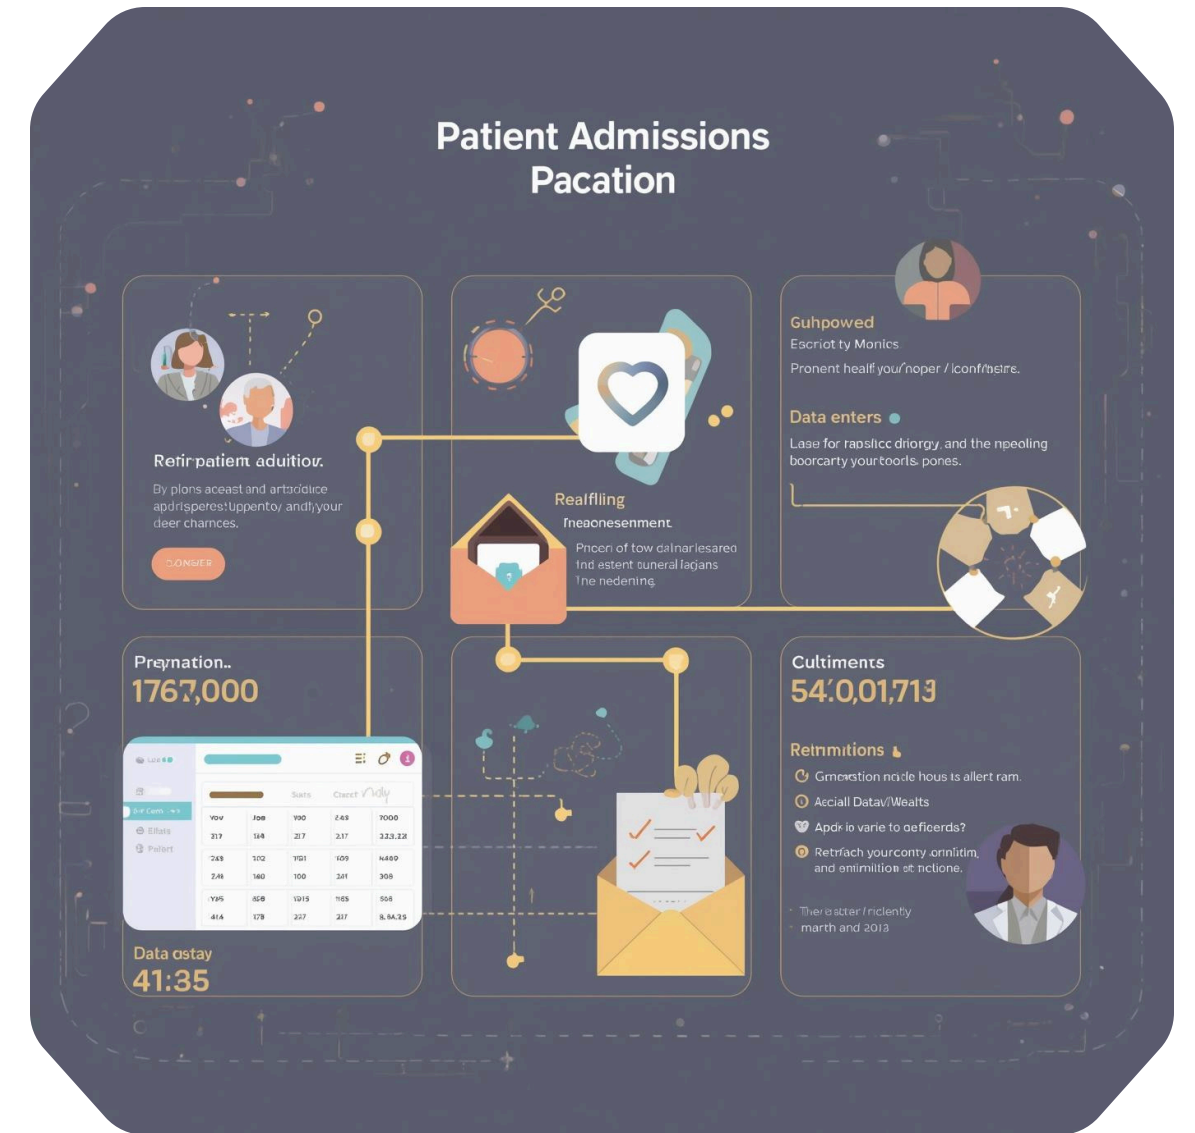

# Patient Admission Process: Before and After

## Manual Entry

Time-consuming and prone to errors

## HIS-DBMS Workflow

Efficient and accurate data processing

# Data Flow

## Data Entry

- User Input
- Module Interaction

## Database Storage

- Data Organization
- Access and Retrieval

# Database Challenges

## Privacy

Protecting patient  
information securely

## Data

Ensuring accuracy  
and reliability

## Concurrency

Managing  
simultaneous data  
access

## Compliance

Adhering to  
regulations and  
standards

# Conclusion: HIS and DBMS Impact
